Press Release

JBUDDY™ Messenger v3.2 released - adds Microsoft Office Communications Server support

JBuddy Messenger v3.2, Zion Software's cross-platform unified communications enterprise instant messaging client adds new conferencing, file transfer and address book server support for Microsoft Office Communications Server (OCS), providing support on Windows, Mac OS X, Linux and other Unix desktops.

Glastonbury, Connecticut - January 5, 2010 – Privately-held Zion Software, LLC today announced the release of JBuddy™ Messenger v3.2, a commercially supported, multi-protocol, cross-platform enterprise instant messaging desktop client solution. In addition to a major update to the LCS and OCS connectivity, JBuddy Messenger v3.2 adds new support for OCS multi-user chat conferencings, LCS and OCS file transfer, LCS/OCS address book server, and federated buddylist (AIM, etc) support.

"With JBuddy Messenger v3.2, we significantly improved Kerberos authentication and connection stability and introduced multi-user chat and file transfer for Microsoft LCS and OCS 2007 users. This is a ground up LCS/OCS implementation which will allow traditionally unreachable (e.g: Linux) users to participate in LCS and OCS networks. We're proud of this release and thankful to our many beta testers." said David Ferrero, Founder and CTO, Zion Software.
